Abstract

Stephen Hawking in his last book 'the Grand Design' has repeatedly described a Multiverse that has 10 raised to the power 500 universes to explain the biophilic nature of our universe. All the other universes are outside our own and as such not open to our scientific scrutiny.

This is hardly an explanation for our magnificent planet with its 9 million species. Sometimes the atheist scientists take our biophilic universe as a brute fact Canadian philosopher John Leslie writes: "Suppose you are facing a firing squad. Fifty marksmen take aim, but they all miss. If they hadn't all missed, you wouldn't have survived to ponder the matter. But you wouldn't just leave it at that – you'd still be baffled and would seek some further reason for your good fortune."

In medicine we use a term P value, which signifies that if something has a likelihood of 5%, it is rejected in favor of what has a likelihood of 95%.

So, only logical conclusion to be drawn from Multiverse theory suggesting 10 raised to the power 500 universes is:

"And He (Allah) gave you all that you wanted of Him; and if you try to count the favors of Allah, you will not be able to number them. Indeed, man is very unjust, very ungrateful." (Al Quran 14:35)

Key words: Biophylic, Universe
